Subject: CFAC - Thoughts on Sharing Region 8 Lead Strategy
Attachments: rev4Region8LeadStrat10.19_srw.docx

David,

During the CFAC call yesterday, Roux requested that I send them the draft EPA Region 8 Lead Strategy and I was wondering what your thoughts are on this.

DP / Ex. 5; Law Enf / Ex. 7(a)

DP / Ex. 5; Law Enf / Ex. 7(a)

Group (other agencies) review. This strategy has also been implemented at Eagle Mine and is in the signed ROD with TRW approval. It is my understanding that it represents the latest strategy for Region 8, but I suppose it could possibly change in the future depending on whether or not it is approved by EPA administration. Is there harm in sharing this document? It summarizes the intake rates, maternal blood lead value, default drinking water concentration, target blood lead value of 8 ug/dL, and the age range for evaluation in the IEUBK model proposed by EPA Region 8.

Let me know your thoughts on this when you have a chance. It would be ideal if Roux would consider what the strategy would mean for the CFAC Site recognizing that the EPA RSL of 400 ppm for residential receptors is outdated. OLEM directives have been published presenting some of this revised information (maternal blood lead, age range for evaluation in the IEUBK model, and target blood lead level <10 ug/dL), but not all of it.

Thank you,
Erin
